1.

Take the pole and screw into the 40cm diameter base

2.

Take one of the security mouldings and drop down one of the sections of the pole

3.

Secure the moulding into position with a screwdriver, repeat this process on the second pole

4.

Position the board on top of both bottom mouldings

5.

Twist the pole to give easy access to secure the moulding into position

6.

Slide the next two sets of mouldings down the insert in the pole, and position the next board on top and secure into position

7.

Insert the top mouldings and again twist the pole for easy access

8.

To add a header panel, insert the header pole into the top of the main pole and secure using the mouldings as previously shown

9.

Continue with this process with as many panels as you require for your exhibition / display
