

POP-UP EXHIBITION DISPLAY STAND user instructions

1

Curve or Straight Pop Up Kits

Pop Up Kit contains:
 Lightweight frame
 Magnetic bars
 Printed graphic panels
 Portable storage case

2

With the red clips at the top of the frame open out gently until the full height has been achieved.

3

Place the magnetic bars in place to lock the frame together.

4

Carefully unroll each of the graphic panels and hook the top node over the retaining hook at the top of the pop-up display.

5

Start from one end and work your way across, placing all graphic panels along the top and lining the graphics up as you go along. Ensure the graphics line up with the magnetic bars. Re-position graphics for perfect alignment.

6

To fit the spotlights, insert the base of the light in-between the top section of tubular frame next to the cross section and pull downwards to let the spotlight rest on the frame.

7

The base of the spot light has cut out grooves to fit under the frame with the spotlight arm resting on the frame, as shown above. This holds the light securely in place.

8

Your Pop-Up exhibition display stand is now ready.
